Serial No.: 10/804,762 Filing Date: March 19, 2004

## AMENDMENTS TO THE CLAIMS

This listing of claims replaces all previous versions, and listings, of claims pending in this application.

## Listing of Claims

1. (Currently amended) A method for specifically inhibiting the development of an adaptive T cell response to target cell-specific, cell surface-expressed alloantigens comprising contacting  $ex\ vivo\ a$  target cell expressing said alloantigen with an expression vector encoding a CD8 polypeptide consisting essentially-of all or a functional portion of a CD8  $\alpha$ -chain, wherein said CD8  $\alpha$ -chain includes a transmembrane domain for expression of said CD8  $\alpha$ -chain on the surface of said target cell whereby said CD8  $\alpha$ -chain inhibits the development of adaptive T cell immunity to the cell surface-expressed alloantigens  $\underline{upon\ transplantation}$ .

## 2-4. (Canceled)

- (Currently amended) A method for specifically inhibiting the development of an adaptive T cell responses to donor cell surface-expressed alloantigens in a recipient, comprising
- (a) contacting ex vivo donor allograft cells expressing said donor alloantigens with an expression vector encoding a CD8 polypeptide consisting essentially—of all or a functional portion of a CD8  $\alpha$ -chain prior to or contemporaneous with transplantation of said allograft cells into said recipient, wherein said CD8  $\alpha$ -chain includes a transmembrane domain for expression of said CD8  $\alpha$ -chain on the surface of said donor allograft cells;
- (b) transplanting said donor allograft cells into said recipient, wherein said cell surface expression of said CD8  $\alpha$ -chain by said allograft cells specifically inhibits the development an adaptive T cell responses to said donor alloantigens.
- (Currently amended) A method for extending the survival of an allograft in a recipient, comprising

Serial No.: 10/804,762 Filing Date: March 19, 2004

(a) contacting  $ex\ vivo$  cells of said allograft with an expression vector encoding a CD8 polypeptide consisting essentially—of all or a functional portion of a CD8  $\alpha$ -chain prior to or contemporaneous with transplantation of said allograft into said recipient, wherein said CD8  $\alpha$ -

chain includes a transmembrane domain for expression of said CD8  $\alpha\text{-chain}$  on the surface of

said donor allograft cells,

(b) transplanting said allograft into said recipient, wherein said cell surface expression of

said CD8 α-chain extends the survival time of said allograft.

7-13. (Canceled)

14. (Previously presented) The method according to any one of Claims 1, 5, and 6, wherein

said CD8 α-chain is a human CD8 α-chain.

(Currently amended) The method according to any one of Claims 1, 5 and 6, wherein said
CD8 α-chain consists essentially of a CD8 α-chain extracellular domain and a transmembrane

domain.

16. (Canceled)

17. (Previously presented) The method according to Claim 15 wherein said transmembrane

domain is a CD8 α-chain transmembrane domain.

 (Withdrawn) An improved transplant allograft comprising allograft cells modified to express a CD8 polypeptide comprising the CD8 α-chain, wherein said allograft is capable of

effectively and specifically inhibiting a recipient immune response to alloantigens.

19. (Withdrawn) The improved transplant allograft of Claim 18, wherein modification of said

allograft cells is achieved using viral-mediated delivery of a nucleic acid encoding said CD8

polypeptide.

20. (Withdrawn) The improved transplant allograft according to Claims 18 or 19, wherein

said CD8 polypeptide is a human CD8 polypeptide.

3

Serial No.: 10/804,762 Filing Date: March 19, 2004

 (Withdrawn) An improved organ preservation solution comprising a vector comprising a nucleic acid encoding a CD8 polypeptide, said CD8 polypeptide comprising a CD8 \( \alpha\)-chain.

- (Withdrawn) The improved organ preservation solution according to Claim 21, wherein said CD8 polypeptide is a human CD8 polypeptide.
- 23. (Withdrawn) The improved organ preservation solution according to Claim 21 or 22, wherein said CD8 polypeptide consists essentially of the extracellular domain of the CD8  $\alpha$ -chain and a transmembrane domain.
- 24. (Withdrawn) The improved organ preservation solution according to any one of Claims 21 to 23, wherein said transmembrane domain is the CD8 α-chain transmembrane domain.
- (Withdrawn) The improved organ preservation solution according to Claim 21, wherein said nucleic acid encoding said CD8 polypeptide comprises the sequence set forth in (SEQ ID NOS:27-28).
- (Withdrawn) The improved organ preservation solution according to Claim 21, wherein said CD8 polypeptide consists essentially of the sequence as set forth in (SEQ ID NOS:27-28).
- 27-39. (Canceled)
